## Design your target-focused library with us!

Dear Dr. ,

Our constantly growing collection of **Target-Focused Libraries (currently more than 300 libraries)** comprises compounds with in silico predicted affinity to a target protein or predicted biological activity.

*Running a screening  
project for specific  
molecular target?*

**DESIGN  
YOUR FOCUSED  
LIBRARY**

If you are running screening projects for specific molecular targets and have not found a target-focused library you are looking for in our list, you could **send us a request** to design it using our Screening Collection for prompt delivery. The collection covers about **250,000 drug-like and lead-like compounds** which are immediately available for screening.

Once your request is received, our team of highly skilled and talented medicinal and computational chemists is ready to facilitate your hit identification, target validation or hit-to-lead optimization project of any level via designing a custom target-focused library.

---

Feel free to contact me if you need more information. I am looking forward to your reply.

Best regards,

**Andriy Dmytrenko, MBA**  
**Director of Business Development and Marketing**
