

Updated OTAVA's β -Turn Peptidomimetic Library

Synthetic compounds which mimic beta-turns of proteins

It gives us a great pleasure to introduce OTAVA's [\$\beta\$ -Turn Peptidomimetic Library](#) that has been extensively updated. The compounds were selected from our in-house stock library using pharmacophore screening. Pharmacophore models were based on real β -turn structures. This library provides additional diversity for drug discovery projects focused on protein-protein interactions. All compounds are in stock and are for prompt delivery, cherry-picking is available.

Thank you for your consideration.

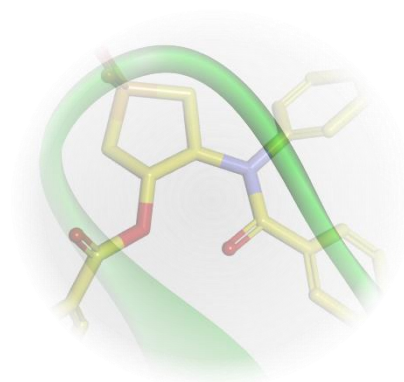

Feel free to contact me if you are interested to obtain this library or if you need more information.

I am looking forward to your reply.

Best regards,

Andriy Dmytrenko, MBA

Director of Business Development and Marketing
